What is ICAR?

Physics based

- 3D model
- simplified wind-field
 - linear mountain-wave theory
- advects atmospheric quantities
 - e.g. moisture and heat
- employs microphysics
 - e.g. Thompson MP

complexity

What is ICAR?

Physics based

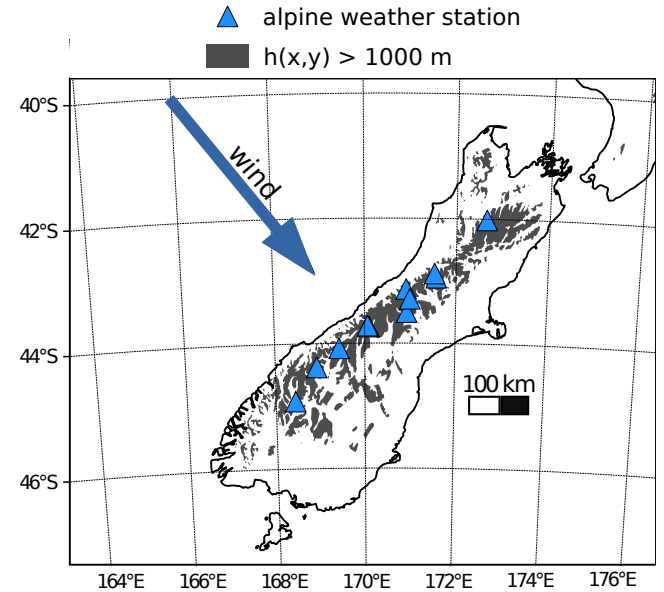

- 3D model
- simplified wind-field
 - linear mountain-wave theory
- advects atmospheric quantities
 - e.g. moisture and heat
- employs microphysics
 - e.g. Thompson MP

Computationally cheap

- $\approx 1/100$ th of core hours compared to WRF

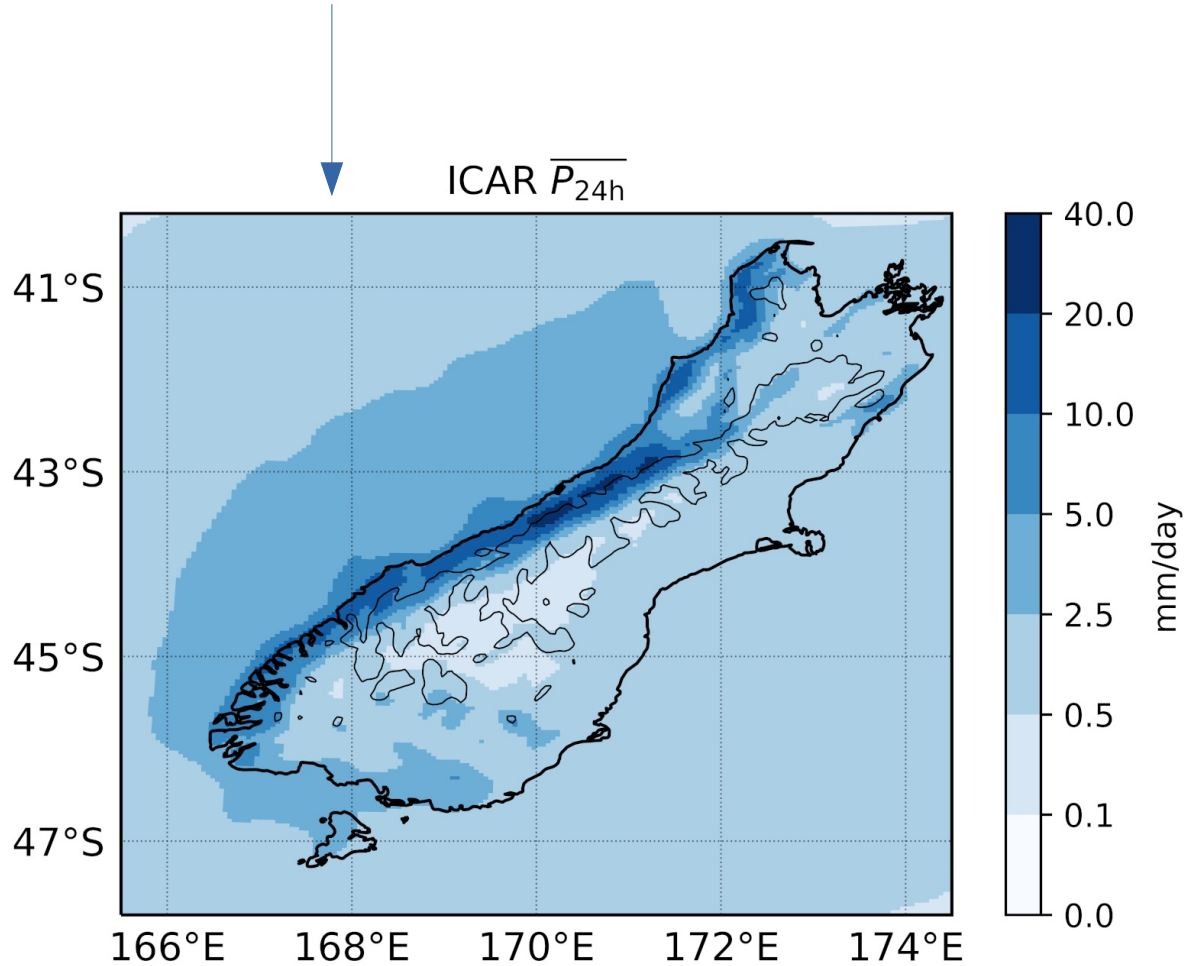

An Evaluation of ICAR

- South Island of New Zealand
 - Alpine Range (Southern Alps) data from 11 weather stations
 - “simple” synoptic situation
- Added value over the forcing Dataset?
 - Yes BUT... (more later)

ICAR precipitation patterns

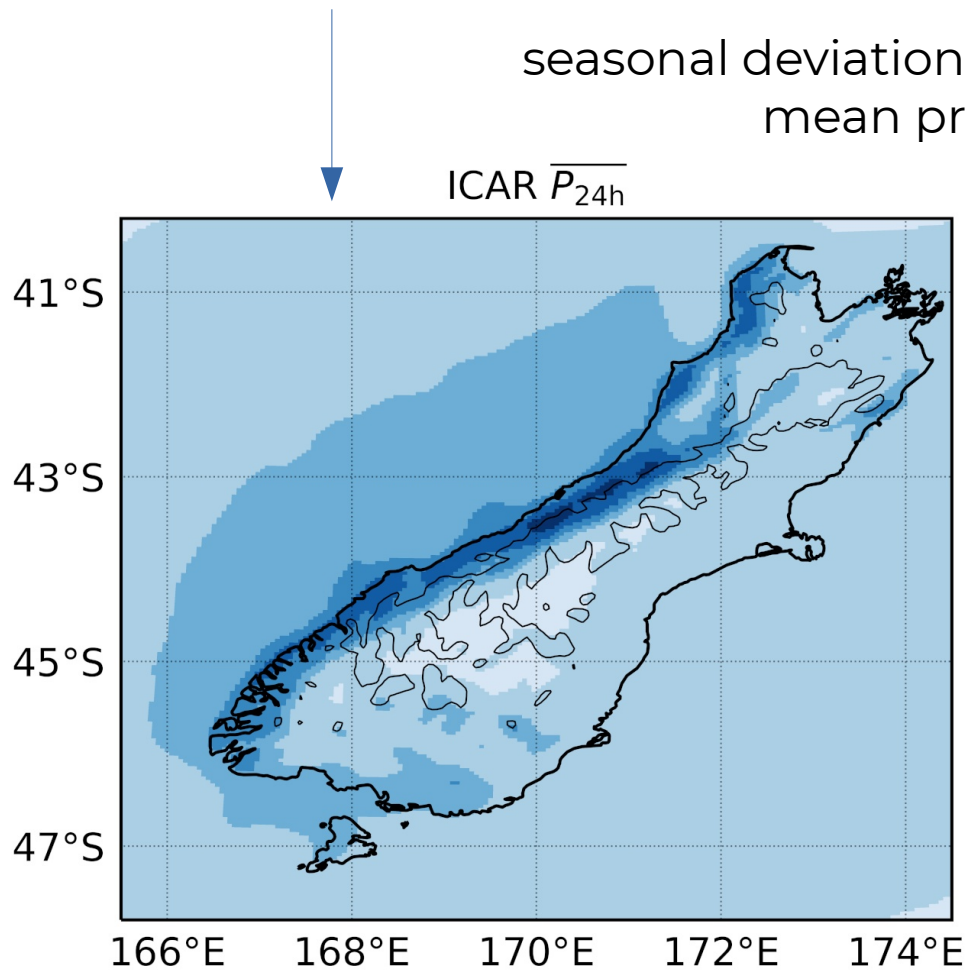

total daily mean precipitation

ICAR precipitation patterns

total daily mean precipitation

seasonal deviation from daily mean precipitation

Does it work?

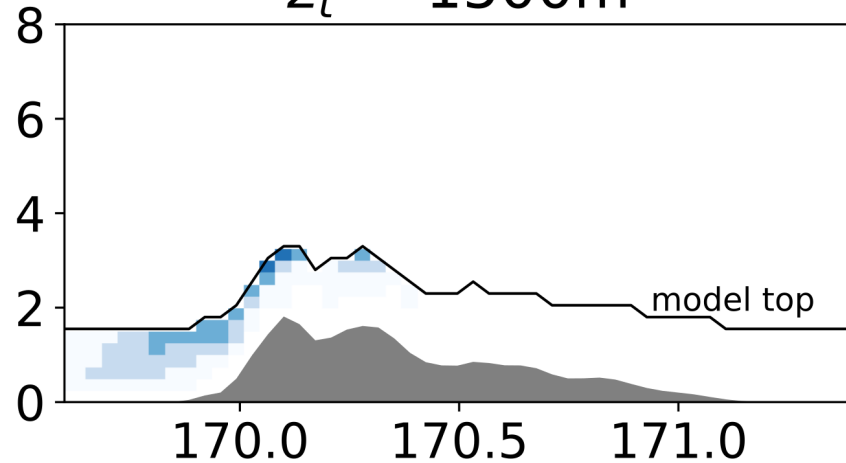

Yes but...

- still to be considered as in development
- more evaluation/understanding needed!
- apply with care!
- avoid pitfalls (see poster)

$z_t = 750\text{m}$

$z_t = 1500\text{m}$

$z_t = 4000\text{m}$

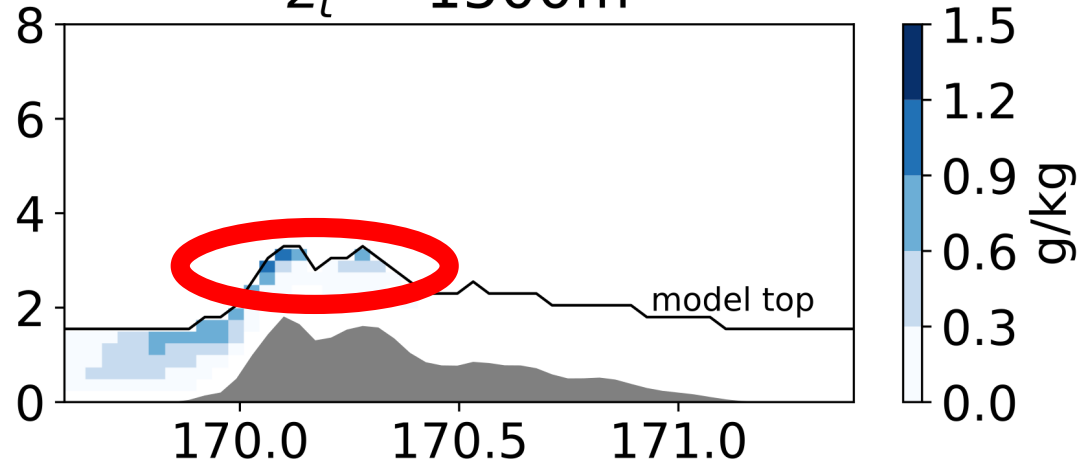

$z_t = 5500\text{m}$

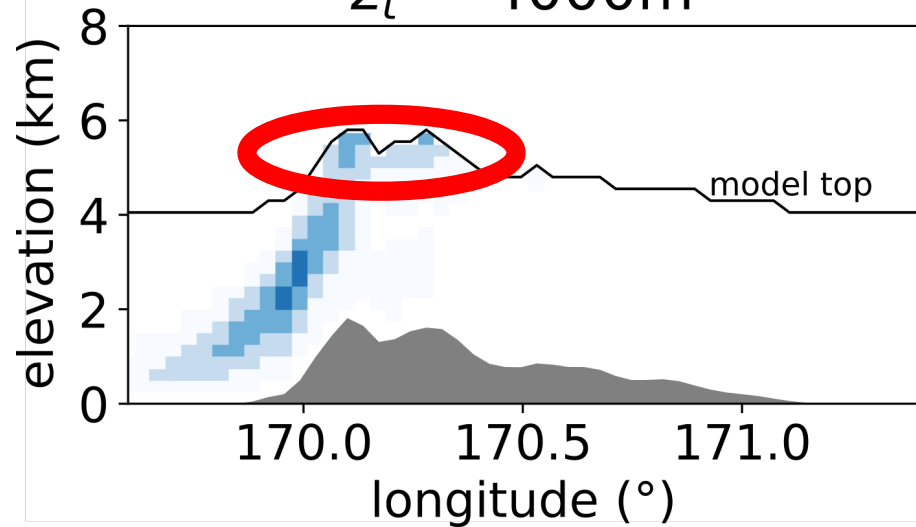

$z_t = 750\text{m}$

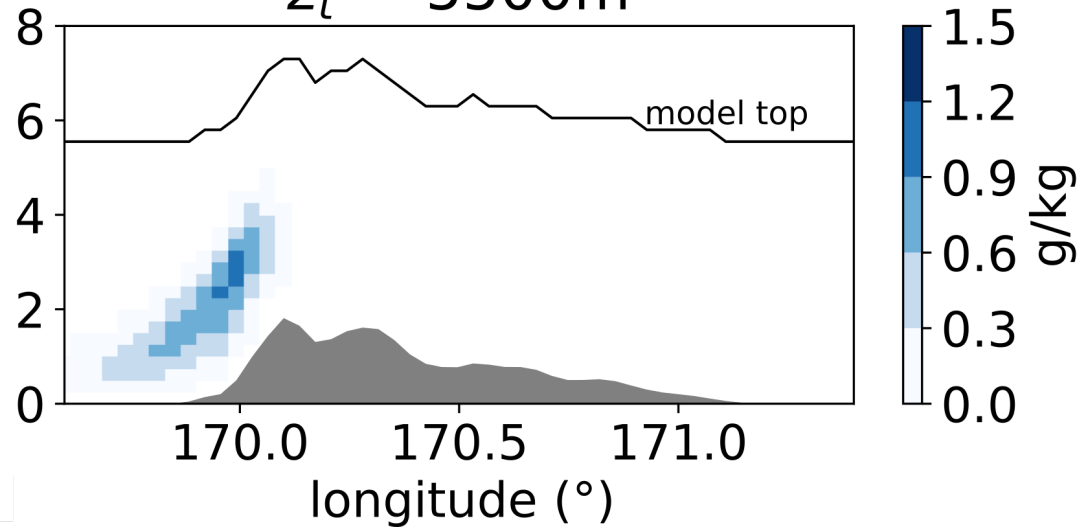

$z_t = 1500\text{m}$

$z_t = 4000\text{m}$

$z_t = 5500\text{m}$

So what's going on here?

- Numerical artifacts at top boundary
- Solutions, references and more details shown at the poster!

Thank you!
